

代码修改步骤

1. 修改 WIFI 名称和密码，保留双引号。

```
1 #include "ApePixelClock.h"
2 #include "Apc_AreaMatrix.h"
3 #include "Fonts/ApcFont35.h"
4 #include <ArduinoJson.h>
5
6 ApePixelClock apc;
7 #define WIFI_SSID      "DLINK-0981"      //note:only support 2.4G wifi
8 #define WIFI_PASSWORD  "ape@2020"
9
10 void setup() {
11     apc.systemInit(WIFI_SSID, WIFI_PASSWORD, 15);
12
13     ApcEffectDef apcEffect_TimeShow;
14     ApcEffectAreaDef timeShowArea1 = {0, 0, 32, 8, 2, 1000};
15     apcEffect_TimeShow.areaDef[0] = timeShowArea1;
```

2. 没有了，仅此而已。需要其他效果，参考
